

PM95A Instruction

Version: 2020.9.4 2nd Version Author: Product Testing Department Weihong Corporation All Rights Reserved

Used together with Weihong NcStudio software, PM95A motion control card (hereinafter referred to as **PM95A**) is used to control the motion of engraving machines, engraving and milling machines, drilling machines, cutting machines, etc.

1 Layout

PM95A is shown as follows:

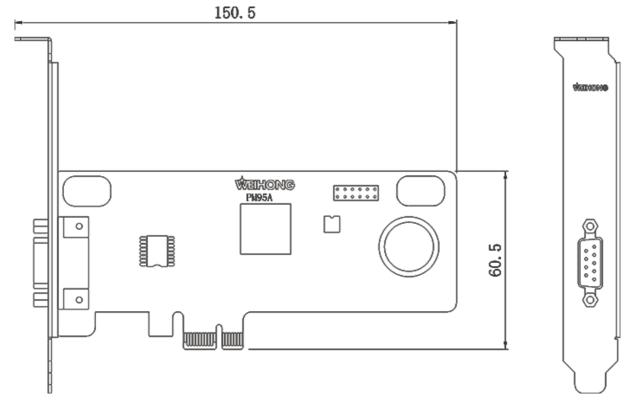

When it is used together with NcStudio software, you need to insert it into PCIE slot. The definition of each interface is the same as that of the computer.

2 Mounting Dimension (Unit: mm)

Mounting dimension of **PM95A** is as follows (unit: mm):

3 Performance

Performance of **PM95A** is as follows:

- Supporting upgrading FPGA program online via the upper control software.
- Supporting backing up both firmware and program, amending FLASH data, and verifying and protecting DNA.
- Supporting Phoenix and PCIE communication.
- Supporting data encryption and registration.
- Strong suitability

You can select the suitable Lambda terminal board according to the following:

- o Axis number
- Whether to enable encoder feedback

4 Precautions

Before using PM95A, please pay much attention to the following:

- This product is a type of fine instruments. Please do not discharge any components by yourself.
- Please turn on power after correctly installing this product.
- Computer Sleep Mode function and Fast Start function may lead to abnormal function of this product. Thus, please refer to the corresponding documentation to disable related functions before using this product.
